The business of business has been changed forever by the COVID-19 pandemic. A shift towards a much more responsible and sustainable way of doing business has emerged post-pandemic, particularly for companies in the agriculture space When you're dealing with farmers, who grow the food we're all dependent on, you have to do things more responsibly," says Venkatram Vasantavada, Director of Seedworks India "You have to consider how we can better take care of the environment, how we can implement more sustainable business models and how to improve sustainability in agriculture.

It's certainly an important part of the work we do." Seedworks's work is all about safeguarding India's agricultural sector throughout the entire lifecycle, from sowing to harvesting. "Our business model is built around providing solutions for farmers to increase their yields and improve their quality," Vasantavada says. "To achieve that, we have to work on the product side, the service side and the education side. "Training and coaching is an important aspect of one's own development, but you've got to go out there and get your hands

Alliance Agritech

First End-To-End Seed Production Facility In North India

dirty to get a real understanding of what it is you do."

If it's manufacturing, he says, you have to attend your manufacturing plants; if it's sales and marketing, you have to spend time with your clients. "Wherever you are, you need hands-on experience," he says. "Doing so helped me build confidence and gave me enough exposure to lead many of our initiatives; however, I know I still have a long way to go."

If it's manufacturing, he says, you have to attend your manufacturing plants; if it's sales and marketing, you have to spend time with your clients. "Wherever you are, you need hands-on experience," he says. "Doing so helped me build confidence and gave me enough exposure to lead many of our initiatives; however, I know I still have a long way to go."

We focus on how we can make a difference in the industry rather than

just follow trends. Our sustainability initiatives come from ourselves. It's not something we're being pushed to overtime," Vasantavada explains. "We're not just meeting a compliance requirement; we genuinely want to do more than the minimum. This comes from our board, and at all levels in the organization. We know it's the right

thing to do and we have to do it. Caring for employees is key to the company and underlies its goal to be best in class for working conditions. "We're trying to achieve better work-life balance for our staff. technology helps us to be more efficient and reduces

TEAM-BUILDING

That means the creation of teams that can work independently within the organization. "The family can play the role of a catalyst guiding force, and as Director, I've worked to build

the team in that way," he says. The finished product of that effort is a business looking to become an integrated player in the "agriculture" space "We want to be a global leader in terms of both capacities, so that

will be one of our strategic shifts going forward." Being able to deliver win-win deals is an important part of all industries, particularly in agriculture, which has a complex and segmented supply chain. We have a 'Good Growth Plan' with in Seedworks, which is designed to lay out principles that are important for food production, as well as the sustainability factors," he says. "We then use that to communicate with the public. relationship with suppliers and customers is key to the business success. we have very good transparent deals with all the suppliers and customers it's always been win-win situations for us
